Lucas Maciel Vieira

Junior Software Engineer in the making | Built Ipsis, an open-source legal AI app with hybrid search and 261 automated tests | Next.js, TypeScript, Python, Postgres | Open to remote junior and internship roles

Cascavel, Paraná, Brazil

Summary

You're hiring a junior engineer, and you want someone who finishes what they start. That's how I work.For 3 years and 5 months I worked in customer retention at a telecom company, where I talked to customers every day about what was broken, offered plan upgrades and took their feedback back to the team. In 2026 I started a second degree, in Software Engineering. Tech is where I want to build my career.My main project so far is Ipsis, an AI legal assistant for criminal defense in Brazil.- Hybrid search (rubric, keyword and semantic, merged with RRF) in one Postgres query- 3,771 legal provisions, cleaned after an audit found 838 errors in the source text- 261 automated tests and CI on every push- One hard rule: the model writes the argument, but every citation of the law is read from the database, so it can't invent one.Stack: Next.js 15, TypeScript, Python, Supabase (Postgres and pgvector), OpenAI, Tailwind, Vercel and GitHub Actions.I also have a bachelor's degree in Business Administration. I speak fluent English.I'm open to remote junior and internship roles. I live in Brazil (UTC-3), so my day overlaps with US working hours. The code and my portfolio are in Featured. If my work fits what your team needs, send me a message.

Experience

Certto Telecom
